DETAILED ACTION

1. This communication is in response to Applicant's Amendment to Office Action dated May 29, 2008, filed September 29, 2008.

1-1. Claims 1, 6, 11, 13, 26, 52, 55, 56, 61, 71, 75, 76, 81, 83, 95, 120, 123, 124, 129, 139, and 140 have been amended. Claims 1-140 are pending.

1-2. Claims 1-140 have been examined and allowed.

Reasons for Allowance

2. The following is an Examiner's statement of reasons for allowance:

2-1. The closest prior art of record discloses:

(1) A system for producing presentations of computer application programs (Chailleux, U.S. Patent Application Publication No. 2002/0109736 A1).

(2) A design and representation schemes used in constructing a prototype computational environment for modeling and simulating multiagent software engineering processes (Mi et al., "A knowledge-based environment for modeling and simulating software engineering processes").

(3) A noninterference monitoring and replay mechanism using the recorded execution history of a program to control the replay of the program behavior (Tsai et al., "A noninterference monitoring and replay mechanism for real-time software testing and debugging").

2-2. Claims 1-140 are allowed in view of the claim amendments filed on September 29, 2008.

Art Unit: 2128

Specifically, independent claim 1 has been amended to identify the distinct combination of features including sub-steps (b), (c), and (e), which has not been uncovered in a single teaching, nor would a modification of prior art references be obvious to one of ordinary skill in the art to yield these limitations in the context of the claim.

Independent claim 71 recites equivalent method limitations as in claim 1.

Independent claim 139 has been amended to identify the distinct combination of features including “executing said first software under control of said second software in a closed-loop fashion automatically and programmatically by applying said synthesized at least one input action to said first software by said second software”, “identifying a model of said first software under control of said second software, wherein said model of said first software includes models of input and output behavior of said first software; wherein said model of input behavior of said first software includes at least one control enabling structure; wherein said at least one control enabling structure is identified and recorded while powered by said first software; wherein said model of output behavior of said first software models at least one display screen region”, and “controlling said model of said first software by said second software automatically and programmatically through said synthesized at least one input action to simulate said input and output behavior of said first software under control of said second software”, which has not been uncovered in a single teaching, nor would a modification of prior art references be obvious to one of ordinary skill in the art to yield these limitations in the context of the claim.

Independent claim 140 recites equivalent method limitations as in claim 139.

Moreover, as stated in MPEP § 2131.02, “The identical invention must be shown in as complete detail as is contained in the ... claim.” *Richardson v. Suzuki Motor Co.*, 868 F.2d 1226,

Art Unit: 2128

1236, 9 USPQ2d 1913, 1920 (Fed. Cir. 1989). The elements must be arranged as required by the claim, but this is not an ipsissimis verbis test, i.e., identity of terminology is not required. In re Bond, 910 F.2d 831, 15 USPQ2d 1566 (Fed. Cir. 1990). Accordingly, independent claims 1, 71, 139, and 140 have been allowed over the prior art of record. Dependent claims are allowed as they depend upon allowable independent claims.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
